

**MONTHLY PROGRESS REPORT #119
FOR APRIL 2007**

EPA REGION I ADMINISTRATIVE ORDERS SDWA 1-97-1019 and 1-2000-0014

**MASSACHUSETTS MILITARY RESERVATION
TRAINING RANGE AND IMPACT AREA**

The following summary of progress is for the period from April 1 to April 30, 2007. Scheduled actions are for the six-week period ending June 15, 2007.

1. SUMMARY OF REMEDIATION ACTIONS

The following is a description of remediation actions underway at Camp Edwards as of April 27, 2007. Remediation actions may include Rapid Response Actions (RRA). An RRA is an interim action that may be conducted prior to risk assessments or remedial investigations to address a known, ongoing threat of contamination to groundwater and/or soil.

Demo Area 1 Groundwater RRA

The Demo Area 1 Groundwater RRA consists of the removal and treatment of contaminated groundwater to control further migration of explosives and perchlorate. Extraction, treatment, and recharge (ETR) systems at Frank Perkins Road and Pew Road include single extraction wells, ex-situ treatment processes to remove explosives and perchlorate from the groundwater, and injection wells to return treated water to the aquifer.

The Pew Road ETR continues operation at a flow rate of 100 gallons per minute (gpm). Power outages due to weather occurring on April 16 and April 20, 2007 resulted in downtime of 66 hours. As of April 27, 2007, approximately 136 million gallons of water have been treated and re-injected at the Pew Road ETR System.

The Frank Perkins Road ETR was operational at a flow rate of 330 gpm until April 17, 2007; when it was shut down to make connections to the RA Building. As of April 17, 2007, approximately 284 million gallons of water had been treated and re-injected at the Frank Perkins Road ETR System.

Demo Area 1 Comprehensive Groundwater Remedial Action

The final remedy for Demo Area 1 groundwater will increase total flow to a rate of 906 gpm from five extraction wells, three of which will be new construction, with recharge of treated water via four injection wells. The Pew Road ETR system will remain in place, and the Frank Perkins Road temporary ETR System will be replaced by a permanent treatment facility.

During the month of April, the following work was performed: Placed concrete for the ceiling of the second floor in the CMU structure. Placed resin in the IX vessels. Performed leak test on the FRP tanks. Completed installation of the ground grid around the perimeter of the DEMO-1 Treatment plant building. Switched over to permanent power. Completed installation of valves. Completed flushing and testing of process piping. Shut down MTU's and completed installation of tie in piping for new building. Continued work on the mechanical piping. Continued work on the interior electrical system. Continued masonry work for the interior CMU structure. Continued hydrostatic testing of the process piping. Commenced electrical terminations at MCC and PLC panels. Commenced grading the site.

J-2 Range Groundwater RRA

The J-2 Range Groundwater RRA consists of removal and treatment of contaminated groundwater to control further migration of explosives and perchlorate. ETR systems include single extraction wells, ex-situ treatment processes to remove explosives and perchlorate from the groundwater, and infiltration basins to return treated water to the aquifer.

The mobile ETR units continue operation at a flow rate of 250 gallons gpm and the building ETR continues operation at a flow rate of 125 gallons gpm. Power outages due to weather occurring on April 16, 2007 resulted in downtime of 28 hours at the mobile ETR units and downtime of 6 hours at the building ETR. As of April 27, 2007, approximately 60 million gallons of water have been treated and re-injected at the mobile ETR System and 39 million gallons of water have been treated and re-injected at the building ETR System.

J-3 Range Groundwater RRA

The J-3 Range Groundwater RRA consists of removal and treatment of contaminated groundwater to control further migration of explosives and perchlorate. ETR systems include single extraction wells, ex-situ treatment processes to remove explosives and perchlorate from the groundwater and use of the existing Fuel Spill-12 (FS-12) infiltration gallery to return treated water to the aquifer.

The ETR continues operation at a flow rate of 175 gallons gpm. Power outages due to weather occurring on April 16, 2007 resulted in downtime of 30 hours. As of April 27, 2007, approximately 51 million gallons of water have been treated and re-injected at the ETR System.

2. SUMMARY OF ACTIONS TAKEN

Drilling progress for the month of April is summarized in Table 1.

Table 1. Drilling progress as of April 30, 2007				
Boring Number	Purpose of Boring/Well	Total Depth (ft bgs)	Depth to Water Table (ft bgs)	Completed Well Screens (ft bgs)
MW-479	J-1 Range (J1P-32)	331	119	240-250
MW-488	J-1 Range (J1S-P04)	219	91	149-159
MW-489	T Range	135	126	124-134
MW-490	Bravo Range	119	110	108-118
MW-491	Charlie Range	159	148	146.5-156.5
MW-492	O Range	93	82	79.5-89.5
ft bgs = ft below ground surface				

Samples collected during the reporting period are summarized in Table 2.

Long-Term Groundwater Monitoring (LTGM) samples were collected at Demo 2, Former A Range, Former K Range, Gun & Mortar Range, J-1 North, J-2 East, L Range, Northwest Corner, residential wells, and Western Boundary. Groundwater profile samples were collected from MW-479 (J1P-32) and MW-488 (J1S-P04). A composite soil sample was collect at the burial pit at J-1 Range. Soil samples were collected from MW-489 Tango Range. Surface water samples were collected near a public beach, a private beach, and near the spit at Snake Pond.

The following bullets summarize the BIP items for the month of April. The pre- and post-BIP sample collection dates are shown:

- Central Impact Area:
April 19, 2007/April 19, 2007: One (1) 81 mm mortar at Test Plot H-3.
April 19, 2007/April 19, 2007: One (1) 4.2 inch HE mortar at Test Plot M-3.
- J1 Range:
April 3, 2007/April 3, 2007: One (1) 105 mm HEAT projectile at J1 J40, Area 4 Target 12.
April 3, 2007/April 3, 2007: Two (2) 81 mm mortars at J1 K27, Area 4.
April 10, 2007/April 10, 2007: One (1) 81 mm mortar at J1 K27, Area 6.

Pre- and post-BIP samples, summarized in Table 2, were collected in accordance with the sampling protocol.

Anomaly investigation as part of the Impact Area Post Screening Investigation (PSI) continued. Tables 3A, 3B, 3C, 3D, 3E, 3F, 3G, 3H, and 3I show the grid summary for Test Plots H-1, H-2, H-3, L-1, L-2, L-3, M-1, M-2, and M-3, respectively.

J-1 Range Supplemental Geophysical Anomaly Investigation continued at grids I-2, I-8, I-9, J-12, K-1, K-27, K-35, K-40, L-1, and L-2. Table 4 shows a grid sheet summary for excavation and munitions recovered for the J-1 Range Supplemental Geophysical Anomaly Investigation for the period ending April 27, 2007.

The following are the notes from the April 26, 2007 Technical Team meeting of the Impact Area Groundwater Study Program office at Camp Edwards.

Southeast Ranges Update – Dave Hill

J-1 – IAGWSP continued investigating QC grid anomalies, two grids remain. Anticipate completion within the next week. There are a few areas that remain for inspection with EPA.

J-2 – IAGWSP began investigation on the QC grid anomalies last week. Twenty-three of 66 have been completed to date.

J-2 Extension – IAGWSP is proposing a pilot test with the dogs following the EM survey. The area was air-magged; there are large chunks of metal there. There may be some difficulty doing anything with APCs. Camp Edwards believes they belong to one of the testing contractors and does not want to take possession of them and will not move them. Dave Hill and Jane Dolan (EPA) will discuss in more detail.

J-1 South Groundwater – Mike Goydas

As discussed in recent Tech meetings, IAGWSP completed installation of well MW-488 along the base boundary and sampled the new wells on Windsong. These data were reviewed; recent concentrations were compared with previous rounds and cross-sections were developed. We have a good understanding of the general distribution and geometry of the plume. There is good control on the Northern and Southern sides of the plume. The Southern side of the plume is defined by wells DP-390, MW-483, DP-387 (located at the base boundary) and well MW-480. The Northern side of the plume is defined by wells MW-360 to the northwest, DP-391, DP-386, and DP-379 (along the base boundary) and MW-482. Results from profile borings and wells MW-483, MW-398, MW-488, and DP-386 match well in cross-section in terms of the top and

bottom of plume mass distribution and general concentration as we see in wells MW-480, MW-481, and MW-482 located immediately downgradient along Little Acorn. In terms of downgradient locations, the series of wells MW-402, MW-400, and MW-403 are positioned to monitor future migration of the plume.

Concentration of RDX in drivepoints at Greenway is as follows: ND at DP-391; 12 µg/l at DP-89; and 2.0 µg/l at DP-91. The next sampling event is planned for early July.

The data cutoff date will be established so the report will have at least two rounds of data for each well along Windsong; a minimum of one round of data for each newly installed well along the base boundary; all other locations will have a minimum of three rounds of data for evaluation. The available data suggest that sufficient data exists to proceed to the RI/FS. It was agreed that an RI/FS document kickoff meeting would be conducted on 03 May at 10:00.

Currently the J-1 Southeast Soil and Groundwater RI/FS is starting in early July for a December Draft date.

J-1 Southeast Soil and Groundwater RI/FS kickoff is tentatively scheduled for Thursday, 03 May at 10:00.

2000 Meter Berm Results – Dave Hill

Soil investigation will be continued, scheduled for next week.

J-3

Comment Resolution Meeting scheduled for the 10 May Tech meeting (EPA requested Groundwater to be scheduled first).

RCS Review – Ben Gregson

The final review of the RCS with Mr. Gonser (IAGWSP) is scheduled for early next week; with anticipation of distributing to the regulatory agencies at the end of next week.

SAR

Tango Range - Sampling is complete; results will be delivered to the regulatory agencies followed by the Draft Final RI at the end of May. A decision on soil removal will be based on the sampling results. IAGWSP will make revisions to the risk assessment based on regulatory agency comments. The new data will not be included in the revised risk assessment unless it appears that it may effect the results. The new data will, however, be provided in the document.

J and K Comments – IAGWSP is working on the responses.

If there is a removal action at Tango, it will happen by mid-June to make 02 July the start shooting date.

Gun and Mortar

Carol Keating's (EPA) comments will be available on 27 April.

Drive Point Work – Completing soil sampling today, will have 12 drivepoints 27 April. Standard turnaround time for sampling results.

Demo 1 Soil

Supplemental PSI report

EPA has the RCL with the discussion on the site visit, IAGWSP is doing a risk assessment of the soil concentrations.

Demo 1 Groundwater

Bob Lim (EPA) requested scheduling the Comment Resolution Meeting for the 10 May Tech Meeting on the SPEIM and O&M Plan that was recently issued.

Update on the Demo 1 RA Startup - The POP test (a three-hour test) is scheduled for Friday, 11 May (the date was later changed to May 4 via email), sampling every hour. The plant will start full-time operation on Monday, 14 May. This is the required one-week notice, and Mr. Nixon will follow up with an email. The technical details on the system startup that need to be resolved before the CRM: frequency of sampling, sampling location ID. Comments on details of land use control need to be resolved and will be done as a separate document.

Western Boundary

Delivery of the Draft Remedy Selection Plan at the end of May; the final RI is due 04 June. Anticipate the MOR will be issued on Monday, 30 April.

ASP

The name ASP has been changed to BA-4 (Bivouac Area) Disposal Site. Tetra-Tech anticipates doing the second excavation next week. The next deliverable is the Completion of Work Report for the RRA effort, due 15 June. This date may slip to a July timeframe.

GP-2 Update – Bill Gallagher

The Revised RCL was distributed last week. EPA's next step is to review the RCL; IAGWSP will amend the document if necessary; and finalize the Qualitative Risk Evaluation.

IART Meeting for April 2007

There was no meeting of the Impact Area Groundwater Review Team (IART) for the month of April, 2007. The next IART meeting is scheduled for May 22, 2007.

3. SUMMARY OF DATA RECEIVED

Validated Data

Table 5 (sorted by analyte) summarizes the detections, since 1997, that equaled or exceeded an EPA Maximum Contaminant Level (MCL), MassDEP MCL (MMCL) or Health Advisory (HA) for drinking water. Table 5 is updated on a monthly basis; discussions in the text are updated on the same schedule as Figures 1 through 8, which are discussed later in this section.

Table 6 summarizes first-time validated detections of explosives and perchlorate below the MCL/MMCL/HA for drinking water received from March 30, 2007 through April 27, 2007. First-time validated detections of VOCs, SVOCs, herbicides and pesticides are included and discussed quarterly in the March, June, September, and December Monthly Progress Reports. Metals, chloroform, and bis (2-ethylhexyl) phthalate (BEHP) are excluded from Table 6 for the following reasons: metals are a natural component of groundwater, particularly at levels below MCLs or HAs; detections of chloroform are pervasive throughout Cape Cod and are not likely the result of military training activities; and BEHP is believed to be largely an artifact of the investigation methods and introduced to the samples during collection or analysis.

Figures 1 through 8 depict the cumulative results of groundwater analyses for the period from the start of the Impact Area Groundwater Study (July 1997) to the present. Each figure depicts results for a different analyte class:

- Figure 1 shows the results of explosive analyses by EPA Method 8330. This figure is updated and included each month.
- Figure 2 shows the results of inorganic analyses (collectively referred to as “metals”, though some analytes are not true metals) by methods E200.8, 300.0, 350.2M, 353M, 365.2, CYAN, IM40MB, IM40MBM, and IM40HG. This figure is updated and included quarterly in the March, June, September, and December Monthly Progress Reports.
- Figure 3 shows the results of Volatile Organic Compound (VOC) analyses by methods OC21V, OC21VM, 504, 8021W, and SW8260 exclusive of chloroform detections. This figure is updated and included quarterly in the March, June, September, and December Monthly Progress Reports.
- Figure 4 shows the chloroform results using the Volatile Organic Compound (VOC) analyses by method OC21V and OC21VM. This figure is updated and included semi-annually in the June and December Monthly Progress Reports.
- Figure 5 shows the results of Semi-Volatile Organic Compound (SVOC) analyses by methods OC21B and SW8270, exclusive of detections of BEHP. This figure is updated and included quarterly in the March, June, September, and December Monthly Progress Reports.
- Figure 6 shows the BEHP results using the Semi-Volatile Organic Compound (SVOC) analyses by methods OC21B and SW8270. This figure is updated and included semi-annually in the June and December Monthly Progress Reports.
- Figure 7 shows the results of Pesticide (method OL21P) and Herbicide (method 8151) analyses. This figure is updated and included quarterly in the March, June, September, and December Monthly Progress Reports.
- Figure 8 shows the results of Perchlorate analysis by method E314.0. This figure is updated and included each month.

The concentrations from these analyses are depicted in Figures 1 through 7 compared to Maximum Contaminant Levels (MCLs) or Health Advisories (HAs) published by EPA for drinking water. For Figures 1 through 7, a red circle is used to depict a well where the concentration of one or more analytes was greater than or equal to the lowest MCL or HA for the analyte(s). A yellow circle is used to depict a well where the concentration of all analytes was less than the lowest MCL or HA. A green circle is used to depict a well where the given analytes were not detected in groundwater samples. For Figure 8, a red circle is used to depict a well where the concentration of perchlorate was greater than or equal to 24 ppb (EPA's Drinking Water Equivalent Level (DWEL) derived from the 2005 National Academy of Science (NAS) report). An orange circle is used to depict a well where the concentration of perchlorate is above 2 ppb (the Massachusetts MCL (MMCL)) and below 24 ppb. A yellow circle is used to depict a well

where the concentration of perchlorate was less than 2 ppb. A green circle is used to depict a well where perchlorate was not detected in groundwater samples. For all figures, an open circle is used to depict a proposed well where the analytes in question for example, Explosives in Figure 1, have not yet been quantified. A black circle represents a well that has been sampled for analytes, but validated groundwater data is not yet available.

There are multiple labels listed for some wells in Figures 1 through 8, which indicate multiple well screens at different depths throughout the aquifer. The aquifer is approximately 200 to 300 feet thick in the study area. Well screens are positioned throughout this thickness based on various factors, including the results of groundwater profile samples, the geology, and projected locations of contaminants estimated by groundwater modeling. The screen labels are colored to indicate which of the depths had the chemical detected above drinking water standards. Generally, groundwater entering the top of the aquifer will move deeper into the aquifer as it moves radially outward from the top of the water table mound. Light blue dashed lines in Figures 1 through 8 depict water table contours. Groundwater generally moves perpendicular to these contours, starting at the center of the 70-foot contour (the top of the mound) and moving radially outward. The rate of vertical groundwater flow deeper into the aquifer slows as groundwater moves away from the mound.

The results presented in Figures 1 through 8 are cumulative, which provides a historical perspective on the data rather than a depiction of current conditions. Any detection at a well that equals or exceeds the MCL/DWEL/HA results in the well having a red symbol, regardless of later detections at lower concentrations, or later non-detects. The difference between historical and current conditions varies according to the type of analytes. There are little or no differences between historical and current exceedances of drinking water criteria for Explosives, Perchlorate, VOCs, Pesticides, and Herbicides; the minor differences are mentioned in the following paragraphs. There are significant differences between historical and current exceedances of drinking water criteria for Metals and SVOCs, as described further below.

Figure 1: Explosives in Groundwater Compared to MCLs/HAs

For data validated in April 2007, two wells, MW-480M2 (J-1 Range) and MW-482M2 (J-1 Range), had first-time validated detections of RDX below the HA of 2 ppb.

Exceedances of drinking water criteria for explosive compounds are indicated in six general areas:

- Demo Area 1 (wells 19, 31, 34, 73, 76, 77, 114, 129, 165, 210, and 211);
- Demo Area 2 (wells 16, 160, 259, 262, and 404);
- The Impact Area and CS-19 (wells 58MW0001, 58MW0002, 58MW0009E, 58MW0011D, 58MW0016B, 58MW0016C, 58MW0018B; and wells 1, 2, 23, 25, 37, 38, 40, 43, 85, 86, 87, 88, 89, 90, 91, 93, 95, 98, 99, 100, 101, 102, 105, 107, 111, 112, 113, 176, 178, 184, 201, 203, 204, 206, 207, 209, 223, 235, OW-1, OW-2, and OW-6);
- J Ranges and southeast of the J Ranges (wells 45, 58, 130, 132, 147, 153, 163, 164, 166, 171, 191, 193, 196, 198, 215, 218, 227, 232, 234, 247, 265, 289, 303, 306, 324, 326, 343, 346, 360, 368, 369, 398, 477, and wells 90MW0022, 90MW0041, 90MW0054 and 90WT0013);
- Landfill Area 1 (wells 27MW0018A, 27MW0020A, and 27MW0020B); and
- Northwest Corner of Base Boundary (well 323).

Exceedances of drinking water criteria were measured for TNT at Demo Area 1 (wells 19S, 31S, 31M, and 31D) and Southeast of the Ranges (196S). Exceedances of the HA for RDX were noted at all of the locations listed above except at MW-45, MW-196, and the LF-1 wells. Exceedances of drinking water criteria were measured for 2,6-dinitrotoluene (2,6-DNT) at MW-45S. Exceedances of drinking water criteria were measured for 1,3-dinitrobenzene at LF-1 wells 27MW0018A, 27MW0020A and 27MW0020B.

Demo Area 1 has a single well-defined source area and extent of contamination. The estimated extent of RDX exceeding the HA at Demo Area 1 based on the most recent groundwater measurements is indicated by a magenta concentration contour line on Figure 1 and Inset A.

Demo Area 2 has five groundwater exceedances of the RDX HA at MW-16S, MW-160S, MW-259, MW-262M1, and MW-404M2. The extent of the contamination is currently under investigation.

The Impact Area has a plume defined by RDX concentrations above the HA of 2 ppb. The plume originates primarily along Turpentine Road and extends downgradient to the west-northwest. Another source of RDX in the Impact Area is CS-19. Portions of CS-19 are currently under investigation by the Air Force Center for Environmental Excellence (AFCEE) under the Superfund program. The extent of RDX has largely been defined in the Impact Area and the investigation phase of the project is nearing completion.

The J Ranges and downgradient areas have five groundwater plumes defined by concentrations of RDX above the HA of 2 ppb. The five plumes originate at the J-1 Range Interberm Area (northern plume in the vicinity of MW-58 and MW-265), the J-2 Range North plume (northern plume extending from MW-130), the J-2 Range East plume (eastern plume including MW-215), the J-3 Range Demolition Area (southern plume extending from MW-163 south to Snake Pond) and the L Range (in an area defined by MW-147 and MW-153 at Greenway Road). In addition, RDX detections at MW-398M2 suggest a possible plume at the south end of the J-1 Range. All the J ranges and the L Range are currently under investigation and the plumes will be updated and refined as new validated data is received.

The Northwest Corner of the base boundary has one validated detection of RDX in groundwater above the HA of 2 ppb at MW-323M2. The M1 screen in this location has a validated detection of RDX in groundwater below 2 ppb.

Figure 2: Metals in Groundwater Compared to MCLs/HAs

Exceedances of drinking water criteria for metals are scattered throughout the study area. Where two or more rounds of sampling data are available, the exceedances generally have not been replicated in consecutive sampling rounds. The exceedances have been measured for antimony, arsenic, cadmium, chromium, lead, molybdenum, sodium, thallium and zinc. Exceedances of the arsenic drinking water criteria were repeated at three (wells 58MW0010A, MW-7M1 and MW-45S) of the six locations with arsenic exceedances. At the remaining three locations (wells MW-3D, MW-52M2 and MW-152M1), arsenic exceedances were not repeated in subsequent results. Cadmium (well MW-52M3) and chromium (well MW-7M1) were each detected above drinking water criteria in a single sampling round in August-September 1999. Exceedances of the drinking water criteria for lead were repeated at two of four locations (wells ASP and MW-45S). At the remaining two locations (wells MW-2S and MW-7M1) lead exceedances were not repeated in subsequent results. Exceedances of the drinking water criteria for molybdenum were repeated at two of eight locations (wells MW-53M1 and MW-54S).

with molybdenum exceedances. All of the molybdenum exceedances were observed in year 1998 and 1999 results. Exceedances of the drinking water criteria for sodium were repeated at 12 of the 21 locations with sodium exceedances (wells MW-2S, MW-21S, MW-46S, MW-57M3, MW-57M2, MW-57M1, MW-144S, MW-145S, MW-148S, MW-187D, ASP and SDW261160). Seven wells (MW-21S, MW-57M1, MW-57M3, MW-187D, BHW215083B, BHW215083D and ASP) had sodium exceedances in year 2004, 2005, and/or 2006 results. Zinc exceeded the HA in seven wells, all of which are constructed of galvanized (zinc-coated) steel.

There have been few exceedances of drinking water limits for antimony and thallium since the introduction of the ICP/GFAA and ICP/MS methods, discussed in the next paragraph. None of the 13 locations with antimony exceedances had repeated exceedances and only one exceedance (well MW-38M2) was measured since January 2003. Eleven of the 72 locations with thallium exceedances had repeated exceedances in subsequent sampling rounds (wells MW-7M1, MW-19S, MW-45S, MW-47M2, MW-47M3, MW-52S, MW-52D, MW-54S, MW-54M1, MW-58S and MW-94M2). There have been no exceedances of thallium since January 2003.

Groundwater samples sent for metals analysis are analyzed for most metals by Inductively Coupled Plasma (ICP) in accordance with U.S. EPA Contract Laboratory Program Statement of Work ILM04.0. In May of 2001, the IAGWSP began analyzing for antimony and thallium using the GFAA (graphite furnace atomic adsorption) method in accordance with EPA Drinking Water Methods 204.2 (antimony) and 279.2 (thallium) in order to achieve lower detection limits for these metals. Both the ILM04.0 and GFAA methods are subject to false positive results at trace levels due to interferences. As a result, the IAGWSP changed to a new method to achieve lower detection limits for antimony and thallium in January of 2003. Groundwater samples are now analyzed for antimony and thallium by Inductively Coupled Plasma/Mass Spectroscopy (ICP/MS) in accordance with the EPA Method 6020. The ICP/MS Method 6020 has greater sensitivity and the added feature of selectivity for antimony and thallium. These additional methods achieve lower detection limits for these two metals and reduce the number of false positive results.

The distribution and lack of repeatability of the metals exceedances is not consistent with a contaminant source, nor do the detections appear to be correlated with the presence of explosives or other organic compounds. The IAGWSP evaluated inorganic background concentrations using the groundwater quality database of 1999, and submitted a draft report describing background groundwater quality in December 1999.

Figure 3: VOCs in Groundwater Compared to MCLs/HAs

Exceedances of drinking water criteria for VOCs are indicated in six general areas: Northeast Corner (well LRMW003), Impact Area boundary (MW-28S), CS-10 (wells 03MW0007A, 03MW0014A, and 03MW0020), LF-1 (well 27MW0017B), FS-12 (wells MW-45S, 90MW0003, and ECMWSNP02D), and in the J-1 Range (well MW-187D). CS-10, LF-1, and FS-12 are sites located near the southern extent of the Training Ranges that are currently under investigation by AFCEE under the Superfund program. Exceedances of drinking water criteria were measured for tetrachloroethylene (PCE) at CS-10, for vinyl chloride at LF-1, and for methylene chloride, toluene, 1,2-dichloroethane, and ethylene dibromide (EDB) at FS-12. These compounds are believed to be associated with the sites under investigation by AFCEE. Detections of benzene, tert-butyl methyl ether, and chloromethane at J-1 Range well MW-187D, chloromethane at Northeast Corner well LRMW003, and 1,2-dibromo-3-chloropropane at Impact Area boundary well MW-28S are currently under investigation.

Figure 4: Chloroform in Groundwater Compared to MCLs

Chloroform has been widely detected in groundwater across the Upper Cape as stated in a joint press release from USEPA, MassDEP, IRP, and the Joint Programs Office. The Cape Cod Commission (2001) in their review of public water supply wells for 1999 found greater than 75% contained chloroform with an average concentration of 4.7 ug/L. The IRP has concluded chloroform is not the result of Air Force activities. A detailed discussion of the presence of chloroform is provided in the Final Central Impact Area Groundwater Report (06/01). To date, the source of the chloroform in the Upper Cape groundwater has not been identified.

Figure 5: SVOCs in Groundwater Compared to MCLs/HAS

Exceedances of drinking water criteria for SVOCs are scattered throughout the study area. All exceedances of drinking water criteria for SVOCs were measured for bis (2-ethylhexyl) phthalate (BEHP), with the exception of two wells. MW-264M1 (J-3 Range) had a detection of benzo(a)pyrene at concentrations of more than twice the HA and MW-241M1 (L Range) had detections of naphthalene above the HA of 100 ppb. Detections of BEHP are presented separately in Figure 6 and discussed in the next paragraph.

Figure 6: BEHP in Groundwater Compared to MCLs

Exceedances of drinking water criteria for bis (2-ethylhexyl) phthalate (BEHP) are scattered throughout the study area. BEHP is believed to be largely an artifact of the investigation methods, introduced to the samples during collection or analysis. However, the potential that some of the detections of BEHP are the result of activities conducted at MMR has not been ruled out.

A detailed discussion of the presence of BEHP is provided in the Draft Completion of Work Report (7/98) and subsequent responses to comments. The theory that BEHP mostly occurs as an artifact, and is not really present in the aquifer, is supported by the results of subsequent sampling rounds that show much lower levels of the chemical after additional precautions were taken to prevent cross-contamination during sample collection and analysis. Only four locations (out of 90) showed BEHP exceedances in consecutive sampling rounds: 28MW0106 (located near SD-5, a site under investigation by AFCEE), 58MW0006E (located at CS-19), and 90WT0013 (located at FS-12), and MW-146M1 (located at L Range). Subsequent sampling rounds at all these locations have had results below the MCL. Eleven wells (27MW0705, 27MW2061, C2-B, C6-C, C7-B, MW-47M2, MW-164M1, MW-168M1, MW-188M1, MW-196M1, and MW-198M1) had BEHP exceedances in the year 2002 and 2003 results. There have been no exceedances of BEHP in 2004 and one exceedance of BEHP, at MW-356M1 (J-3 Range), in 2005.

Figure 7: Herbicides and Pesticides in Groundwater Compared to MCLs/HAS

There has been one exceedance of drinking water criteria for pesticides, at well PPAWSMW-1. A contractor to the United States Air Force installed this monitoring well at the PAVE PAWS radar station in accordance with the Massachusetts Contingency Plan (MCP), in order to evaluate contamination from a fuel spill. The exceedance was for the pesticide dieldrin in a sample collected in June 1999. This well was sampled again in November 1999. The results of the November sample indicate no detectable pesticides although hydrocarbon interference was noted. It appears from the November sample that pesticides identified in the June sample were false positives. However, the June sample results cannot be changed when following the EPA

functional guidelines for data validation. The text of the validation report for the June sample has been revised to include an explanation of the hydrocarbon interference and the potential for false positives.

There has been one exceedance of drinking water criteria for herbicides, at well MW-41M1 (Impact Area). This response well was installed downgradient of the Impact Area. The exceedance was for the herbicide pentachlorophenol in a sample collected in May 2000. There were no detections above the MCL of this compound in the three previous sampling rounds in 1999, nor in the subsequent sampling rounds in 2000, 2001, 2002, and 2003.

Figure 8: Perchlorate in Groundwater Compared to a 2 ppb Concentration

For data validated in April 2007, one well, MW-482M3 (J-1 Range), had a first-time validated detection of perchlorate below the MMCL of 2 ppb.

Sampling and analysis of groundwater for perchlorate was initiated at the end of the year 2000 as part of the IAGWSP. Cumulative exceedances of the 2 ppb concentration of perchlorate are indicated in seven general areas:

- Demo Area 1 (wells 19, 31, 32, 33, 34, 35, 36, 73, 75, 76, 77, 78, 114, 129, 139, 162, 165, 172, 210, 211, 225, 258 and 341);
- Impact Area and CS-19 (wells 58MW0009C, 58MW0015; and wells 38, 89, 91, 93, 101, and OW-1);
- J Ranges and southeast of the J Ranges (wells 93, 125, 127, 128, 130, 132, 142, 143, 158, 163, 166, 193, 197, 198, 215, 232, 234, 237, 243, 247, 250, 263, 265, 286, 289, 293, 295, 300, 302, 303, 305, 307, 310, 313, 319, 321, 324, 326, 329, 339, 343, 346, 348, 366, 368, 370, 393, and wells 90PZ0211, 90MW0022 and 90MW0054, 90WT0013, J2EW3-MW-2-B, and RS003P);
- Landfill Area 1 (27MW0031B);
- CS-18 (well 16MW0001);
- Northwest Corner of Base Boundary (wells 4036009DC, 66, 270, 277, 278, 279, 283, 284, 287, 297, 301, 309, 323, and RSN0W3); and
- Western Boundary (wells 80, 233, and 267).

Demo Area 1 has a single well-defined source area and extent of contamination. The downgradient extent of the perchlorate plume has been determined with the installation of monitoring wells along the power line right-of-way east of Fredrickson Road.

The Impact Area has eight locations with exceedances of the 2 ppb concentration of perchlorate. The perchlorate plume extends from near the center of the Impact Area to the northwest, in the vicinity of Burgoyne Road.

Plumes have been identified in four areas in the J Ranges. The J-1 Interberm perchlorate plume has several perchlorate detections in downgradient locations MW-265, MW-286, MW-303, MW-326, MW-346, and MW-370. The J-3 Range Demolition perchlorate plume has detections in several wells immediately downgradient of the source area, which is centered at MW-198, and further downgradient centered near location 90MW0054. The J-2 Range North perchlorate plume has detections at source area locations MW-130 and MW-263, and downgradient locations MW-289, MW-293, MW-300, MW-302, MW-305, and MW-313. The J-2 East perchlorate plumes are in the process of delineation and include detections at MW-307,

MW-310 and MW-368. There is a single perchlorate detection (well 90WT0013) at the L Range which exceeds the 2 ppb concentration.

The Northwest Corner has a perchlorate plume extending from Canal View Road at the base boundary to the Cape Cod Canal. This area is under investigation and the plume will be updated and refined as new data is received.

The LF-1 and CS-18 areas are under investigation by AFCEE in the Superfund Program.

The Western Boundary has three locations (wells 80, 233, and 267) which exceed the 2 ppb perchlorate MMCL.

Rush (Non-Validated) Data

Rush data are summarized in Table 7. These data are for analyses that are performed on a fast turnaround time, typically 1 to 10 days. Explosive analyses for monitoring wells, and explosive and VOC analyses for profile samples, are typically conducted in this timeframe. Other types of analyses may be rushed depending on the proposed use of the data. The rush data have not yet been validated, but are provided as an indication of the most recent preliminary results. Table 7 summarizes only detects, and does not show samples with non-detects.

In April, there was either no rush data received or it was non-detect for all analytes, therefore Table 7 is not included in this report.

4. DELIVERABLES SUBMITTED

Deliverables submitted during the reporting period include the following:

Monthly Progress Report No. 120 for March 2007	04/09/2007
MMR-10037 Draft CIA FSSR	04/13/2007
RCL for RPA Comments on Draft GP-2 Qualitative Risk Assessment	04/17/2007
Response to MassDEP Comments on the Draft J-1 Range Detailed Reconnaissance, EM-61 Survey and Aerial Photo Assessment – Summary and Recommendations Project Note	04/18/2007
RCL to MADEP Comments on Draft Gun and Mortar RI Work Plan	04/25/2007

5. SCHEDULED ACTIONS

Figure 9 provides a Gantt chart updated as of January 7, 2007, to reflect progress and proposed work. The January 7, 2007 version is a draft, which is still awaiting final approval from EPA and MassDEP. The following documents are scheduled to be submitted in May and early June:

- Demolition Area 1 Groundwater Final Performance Monitoring Plan
- J-2 Range Soil Final Rapid Response Action Completion of Work Report
- J-2 Range Groundwater Final Remedial Investigation/Feasibility Study Report
- J-2 Range Groundwater Final Remedy Selection Plan
- J-3 Range Groundwater Final Rapid Response Action Completion of Work Report
- J-3 Range Groundwater Final Remedy Selection Plan
- J-3 Range Groundwater Draft Rapid Response Action Performance Monitoring Plan
- Western Boundary Soil/Groundwater Draft Remedy Selection Plan
- Gun & Mortar Range Soil Draft Rapid Response Action Plan
- Phase II b Soil/Groundwater Final Investigation Report

- Ammunition Supply Point Soil/Groundwater Final Rapid Response Action Completion of Work Report

The following documents are being prepared or revised during May and early June:

- Demolition Area 1 Soil Draft No Further Action Decision Document
- Demolition Area 1 Groundwater Draft Interim RA & Close-Out Report
- J-1 Range Soil/Groundwater Draft Rapid Response Action Performance Monitoring Plan
- J-1 Range South Soil/Groundwater Draft Remedial Investigation/Feasibility Study Report
- J-1 Range North Soil/Groundwater Draft Remedial Investigation/Feasibility Study Report
- J-2 Range Soil Draft Investigation Report
- J-2 Range Groundwater Final Rapid Response Action Completion of Work Report
- J-2 Range Groundwater Draft Decision Document
- J-2 Range Groundwater Draft Performance Monitoring Plan
- J-3 Range Soil Draft Investigation Addendum
- J-3 Range Groundwater Draft Decision Document
- L Range Soil/Groundwater Draft Remedial Investigation/Feasibility Study Report
- Central Impact Area Soil Draft Investigation Report
- Northwest Corner Soil/Groundwater Draft Remedial Investigation/Feasibility Study Report
- Demo 2 Soil/Groundwater Draft Investigation Report
- Gun & Mortar Range Soil/Groundwater Final Investigation Plan
- Former K Range Final Remedial Investigation Report
- Former A Range Soil/Groundwater Draft Remedial Investigation/Feasibility Study Report
- Phase II b Soil/Groundwater Draft No Further Action Decision Document
- Small Arms Range Final Soil/Groundwater Investigation Work Plan
- Small Arms Range Draft Soil Rapid Response Action Plan
- Wide Area Source Assessment Final Soil/Groundwater Work Plan

BWTS = DEPTH BELOW WATER TABLE, START DEPTH, MEASURED IN FEET

BWTE = DEPTH BELOW WATER TABLE, END DEPTH, MEASURED IN FEET

DW LIMIT = EITHER THE MCL OR LOWEST HEALTH ADVISORY CONCENTRATION (CHILD, ADULT OR LIFETIME)

J = ESTIMATED DETECT

AOC = Area of Concern

CIA = Central Impact Area

BWTS = DEPTH BELOW WATER TABLE, START DEPTH, MEASURED IN FEET

BWTE = DEPTH BELOW WATER TABLE, END DEPTH, MEASURED IN FEET

DW LIMIT = EITHER THE MCL OR LOWEST HEALTH ADVISORY CONCENTRATION (CHILD, ADULT OR LIFETIME)

J = ESTIMATED DETECT

AOC = Area of Concern

CIA = Central Impact Area
